the 1990s, the number of people in the world who are illiterate has increased from 1.2 billion to 1.5 billion (UNESCO 2003).

There are a number of reasons for this increase. One of the main reasons is that the population of the world is growing rapidly. In 1990, the world population was 5.3 billion. In 2003, it was 6.1 billion. This means that there are 800 million more people in the world than there were in 1990.

Another reason for the increase in illiterates is that the number of people who are not attending school is increasing. In 1990, there were 1.2 billion people who were not attending school. In 2003, there were 1.5 billion people who were not attending school.
